

Bar Code Screen Settings

Introduction

This document provides the EOIR standard workstation configuration settings for bar-code labeling. All bar code custom applications were developed and tested with these settings. Use of settings other than these may lead to errors in bar-code operation. For example, 1) users may not see all available toolbar options when using a screen resolution other than that recommended; and 2) when using a large font display setting, bar codes may print out in a truncated fashion.

Display Settings

Display Properties Dialog Box

1. Right-click the Windows desktop and select **Properties**. (Figure 1).

Figure 1

2. The Display Properties dialog box opens. Select the **Settings** tab (Figure 2).
3. (Recommended) Verify the Screen Resolution is set to 1280 by 1024 for a square monitor or 1280 by 960 for a widescreen monitor.
4. On the Display Properties Settings tab, click **Advanced**.
5. The Monitor and NVIDIA Properties dialog box opens (Figure 3).
6. (Required) Verify the DPI setting is set to Normal size (96 DPI).
7. If changes were made click **Apply**, otherwise click **Cancel** to close the dialog boxes.

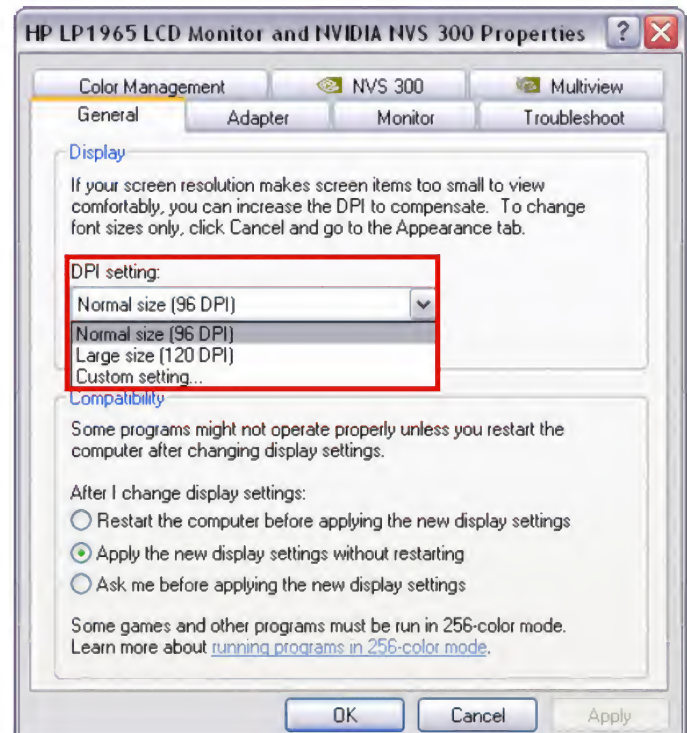

Figure 3

Note: Users may need to contact the EOIR Help Desk to change this setting.

Bar Code Screen Settings

Internet Settings

Internet Properties Dialog Box

1. Click **start** on the Windows taskbar (Figure 4).
2. Select the **Control Panel** option to open it.

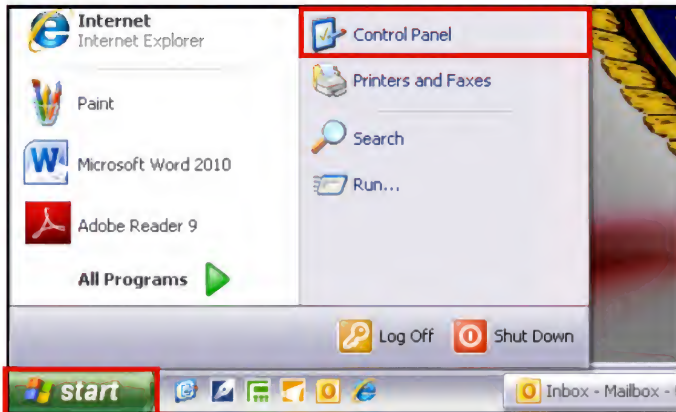

Figure 4

3. The Control Panel opens. Double-click **Internet Options** (Figure 5).

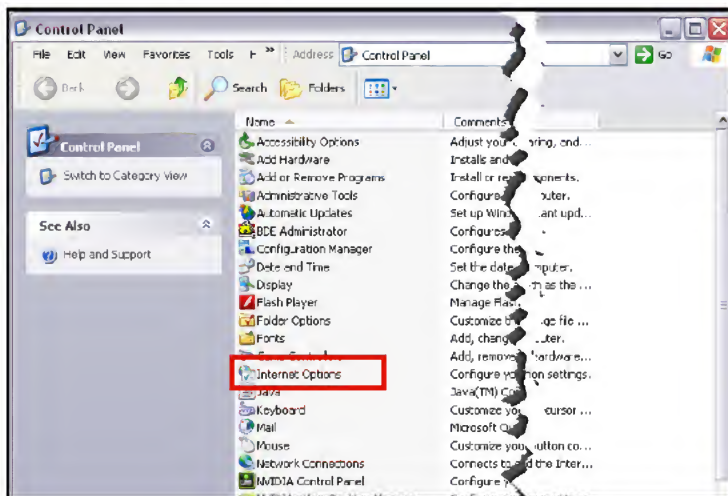

Figure 5

4. The Internet Properties dialog box opens. Select the **Privacy** tab (Figure 6).

(b) (7)(E)

6. If changes were made click **Apply**, otherwise click **Cancel** to close the dialog box.

7. Close the Control Panel window.
